

Central Heart Institute

EKG Strip Interpretation Report
Date: September 05, 2026

Technical Details

Device: GE MAC 2000

Speed: 25 mm/sec

Lead II Rhythm Strip - 10 second duration

Measurements

Heart Rate: 88 bpm

PR Interval: 156 ms (normal 120-200)

QRS Duration: 94 ms (normal 60-100)

QTc Interval: 412 ms (normal 350-450)

Axis: +62 degrees (normal)

Interpretation

Normal Sinus Rhythm. Regular R-R intervals. No ectopic beats, atrial fibrillation, or flutter waves detected. Normal P-wave morphology with consistent PR interval. Narrow QRS complexes with normal progression. No ST-segment elevation or depression. No T-wave inversions. U waves not present.

Conclusion: Normal EKG. No acute ischemic changes.

Comparison to Prior Study (Aug 2024)

No significant interval change. Heart rate decreased from 102 bpm to 88 bpm (consistent with beta-blocker therapy). All intervals remain within normal limits.
